## Allowance for Credit Losses - Q4 2021 Movement

## ACL Movement:

- Moody's November vintage continues to show a favorable economic scenario
- The probability assigned to the S3 scenario was increased to reflect uncertainty tied to epidemiological and fiscal assumptions. This contributed approximately $\$ 13$ million in additional reserves, which are reflected as part of the economic scenario impact
- Stability in the economic outlook and borrower performance contributed to the reductions in qualitative reserves
- Portfolio changes include changes in credit quality and volume mix

## Economic Scenario:

- Probability weighted Moody's scenarios
- Baseline scenario is assigned the highest probability, followed by the S3 scenario
- 2022 P.R. and U.S. Baseline forecast for GDP growth remained consistent QoQ
- The unemployment rate in U.S. and P.R. shows improvement through 2022
